

January 23, 2012 VTXml Release

1) Adding Maximum Number of Concurrent Instances (MaxNumInstances) to the Feature Option screen in support of AMP. This property will be included in Ebix 2.22 output only. Let us know if this needs to be included in any other output.

2) Life WINs will no longer show up in the WIN list (WIN dropdown, Output WIN list, Build History and Activity Log).

3) Added Edit Table Values link on the Table Definition screen. This now allows you to go directly to the Table Values screen once you have created the Table Definition.
